Training Course Descriptions

OSHA 10 Hour for the Construction Industry

The OSHA 10 hour training program provides training for entry level workers and employers on the recognition, avoidance, abatement, and prevention of safety and health hazards in the construction workplace. All attendees will become familiar with using the OSHA standards for construction 23 CFR 1926. Through this training, workers will be more knowledgeable about workplace hazards and their rights. Workers will develop a safety mindset and learn valuable skills for their future.

OSHA 30 Hour for the Construction Industry

The OSHA 30 hour training program is a comprehensive safety program designed for anyone in the construction industry - specifically safety directors, foremen, and field supervisors. All attendees learn to identify hazards found on construction sites and develop specific strategies to prevent workplace injuries. This program emphasizes recognition, avoidance, avoidance, and prevention of health hazards in the workplace.

Rough Terrain Forklift Operator Training

Rough terrain forklift operator training program provides training for forklift operators in all aspects of forklift operation and procedures. Attendees will be taught general safety rules, proper inspection criteria, and dangers associated with the use of forklift equipment. The program is designed to provide all attendees with the skills and knowledge to become competent forklift operators.

Industrial Forklift Operator Training

Industrial forklift operator training provides training will provide in depth instruction on how to operate a forklift with a focus on how to maintain your stability and handling while lifting loads properly. Attendees will also be taught general safety rules, proper inspection criteria, and dangers associated with the use of forklift equipment.

Rigging & Signal Person Training

Due to new requirements by OSHA, anyone performing crane signals and/or rigging operations on a construction site must be "qualified". The signal person has many responsibilities and plays an integral part in the safety of a crane operation. As part of this course, the instructor will properly prepare a signal person to do their job safely and correctly. The rigging portion of the course will provide the attendees with information and training needed to become a "qualified rigger" as required by the new crane standards.

Training Course Descriptions

Frame Scaffold And/Or Mast Climber Training

Frame scaffold training will give attendees the awareness of the proper principles of working with, erecting, and inspecting frame scaffold. The course will identify requirements of frame scaffolding work, describe hazards and their controls, familiarize attendees with the equipment and its use, and proper inspection and maintenance. Mast Climber training programs will be similar to frame scaffold, but will incorporate hazards, inspection/maintenance, and proper use of mast climber systems.

Fall Protection Training

During this training course attendees will learn to identify fall hazards, fall hazard evaluation and fall hazard controls that are critical to health and safety in construction. This course focuses on fall injuries and fatalities and the definition of fall protection. Topics covered include, but are not limited to background of fall protection, hazard assessment and control, and common problems and solutions.

OSHA Inspection Training

Employers must be aware of their rights and how to exercise them during the OSHA inspection process. This course will help employers and employees understand what they might be doing that has prompted the OSHA inspections and how to navigate through this process to make the experience less painful and costly.

First Aid/CPR Training

This hands-on skills training prepares you to respond to breathing and cardiac emergencies. It also teaches the skills and knowledge needed to provide care for victims of sudden cardiac arrest through the safe use of an automated external defibrillator (AED).
